🚀 Projects

Clone of Tomestry (Food Delivery website)

Made a clone of Tomestry which is Food Delivery website of BBD University. It consists of Register Page, Login Page for user authentication then, Home Page, Menu Page, Cart Page, Managing Address Page, Billing Page, Order Placed Page, and the Track order page to track user's recent orders. There is also a Admin Panel which controls all the activities of the User as well as the Vendors. The website is made using React and Node with RestAPI and MongoDB.

Boat Nirvana Clone

Made a clone of Boat Nirvana, which is an e-commerce website for electronics & clothes products. It consists of Register Page, Login Page for User Authentication then, Home page, Category page, Category Items Page, Cart drawer, Address Modal, Payment Modal, Mobile Authentication Model, Placed Order Page, Track Order page. There is also a Admin Panel to add the New Category & It's Category Items. The website is made using React and Node with RestAPI and MongoDB.

Best Caller

It is a custom flutter application which consists of 3 features namely, the contacts section fetches all contacts from the system's Contact List & have an option to make a call. Secondly, the Message section consisting a two TextFields to type your message & enter the phone no. You want to text message from default message app Or to whatsApp. Thirdly, there is also a Dialer section which consists of a Phone Dialer and you can make a call by dialing the number, but there is a twist in dialer i.e., when you make a call then, the call will continuously run after every 40 seconds if you don't close the app from the system's menu list. This is an hybrid flutter application with 3 cool features.

BigBank Exchange

It is Cryptocurrency Flutter application consists of Login & Register with email authentication via OTP sent on registered email. Then, Dashboard page listing the main featured Coins of USDT pairs. Also it consists of five Bottom Navigation bar Items listing 5 different pages namely, Home page consisting of Carousel, Featured Price Bar, Featured Menus, & Price Listing.Secondly, the Markets tab consists of four different symbol coin pairs listing namely (INR, USDT, BNB, BTC) & also a search bar to search a particular coin data. Thirdly, the Trade section consists of the Buy & Sell part of any particular coin. Fourthly, the P2P section consists of Person to Person Buy & sell process and it is being done if any user has done the KYC part. Fifthly, the Wallets section consists of Overview of Equity value of a particular user balance, the Withdraw section, the Deposit section, & the Transfer section. There is also a User profile Section which is being accessed via Home page, also this section consists of User referral system which is being manipulated via Firebase dynamic links. This above project is made with Flutter & Node Js with Rest API & Firebase for dynamic links creation & execution.

MMM REVOLUTION

This is an MLM flutter project consisting of Home page showing the detailed view of MMM revolution i.e., it's rules, testimonials, facts, Ideology, FAQ, MMM abroad, Charity, Login & Registration via Referral system. After Login to the application interface you will be redirected to the Dashboard page consisting of posters, featured menus namely, (Mavro shop, eMavro Wallet, Buy ticket, Stake eMavro, system news, support. Also on the Dashboard page there is two tab bars showing the Orders & Dispatchers data listing in Listview builder. The application consists of four different Bottom Navigation bar Items namely, Dashboard page, Participants page listing the Expansion panel Data table of all the participants of a particular guider. Mavro page consisting of Expansion Data table listing the transactions. Last but, Not the Least the MMM Extra page consisting of Web tasks to gain some extra money or position of a particular user by doing a daily web Task. There is a Side Drawer consisting of various categories pages via Dashboard page. This application is made using Flutter.

Find Kolkata

It is Flutter project consisting of two different applications, the Merchant & User Application and an Admin Application. It is a one stop destination for discovering everything Kolkata gas to offer. Whether you're a local resident or a visitor exploring the vibrant city of Kolkata. The listing app designed to help people navigate and uncover the best places, services, and experiences the beautiful city has in store for people. It also has Admin Panel to control activity of users, merchants. When a listing will approve from admin side then, it will immediately show in client application. It has both Web Application & Android Application based on Flutter. The project is made using Flutter, NodeJs, MongoDB & RestAPI.
